

Optimize Profit. Call Brandon Ambrose: 780-524-7941

Lower Costs • Boost Production • Optimize Profit

Our People are Our #1 Asset

And they're why we're in business. Reliance team members aren't just employees at an oil company. Everyone here invests in hard work, up-to-the-minute training, has specialized and varied skills, and genuinely cares about results.

We are empowered to be multi-disciplined. Our clients benefit through our ability to make choices with the cost of decisions in mind. We work together to make improvements to our company - which translates into more profit for yours.

- Brandon Ambrose · Owner & Business Development
- Adam Cann · B.Comm, Finance & Administration Manager
- Mitchell Hoblak · Senior Well Optimization Analyst
- Nic Lefebvre · B.Sc, Lead Software Developer
- Eric Watkins · B.Sc, Software Developer
- Rory Landry · Senior Production Operator
- Matthew Shack · Pilot, Electrician, Production Operator
- Austin MacDonald · Pilot & Production Operator
- Pat Herren · Pilot & Production Operator
- Desmond Paul · Pilot & Production Operator
- Dudley Jacobsen · Pilot & Production Operator
- Danial Ambrose · Production Operator

WE OPTIMIZE DEEP BASIN OIL & GAS ASSETS

WE SPECIALIZE IN REMOTE ACCESS & MATURE FIELDS

Reliance Production Optimization

LOWER COSTS

Less Equipment Management Costs

Our on-hand transportation equipment ensures that we get there no matter the circumstances. From trucks to ATVs, we are experts at accessing remote areas with minimal impact to the environment while potentially reducing road maintenance to \$0.

We Supply Fully-Trained Staff

We have our own team complete with multi-disciplinary people who are trained to solve problems quickly. Our team is constantly improving through cross-training, practical experience, and institutional learning. Operators are trained to be informed about the cost of their choices.

Fewer Maintenance Costs

Our team is fully trained to spot all optimization opportunities including preventative care for all Natural Gas Assets we work on. We have proven cost reduction rates from 35% to 81% for various areas.

OUR PROCESS

Knowledge of Entire Process

Our five-step optimization process is proven to be effective, ensuring boosted production at a lower cost. Using our highly-trained team, Ezops software, and cost-minded decision making, we optimize faster for a better return.

Truly Smart Data Analysis

Through comprehensive analytics using our Ezops software, daily decisions become simpler and more cost-effective. We upload data frequently for consistent, timely reporting.

Asset Management Accounting

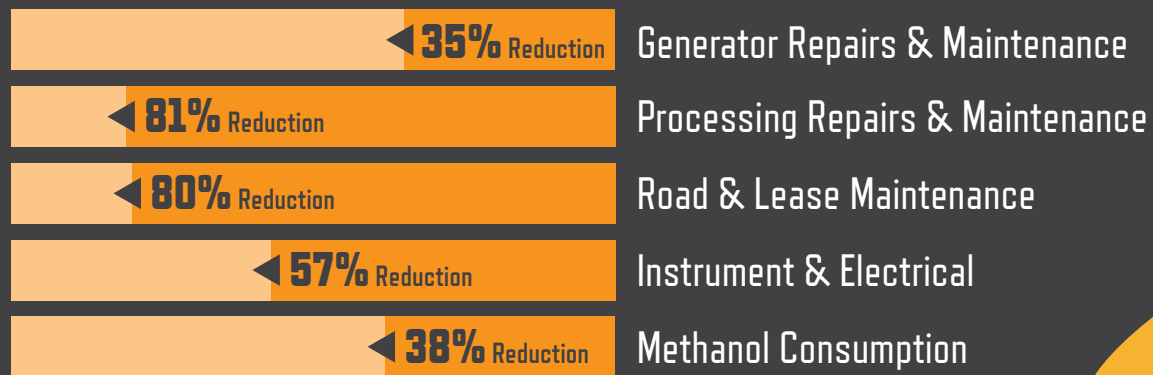

Gain elevated insight for all required AER Regulations with our service. Accounting systems are used to look at all fiscal inputs in order to make informed decisions.

High Level of Safety

Safety is not taken lightly. We've developed a robust safety program and are a member of the Alberta Construction Safety Association. We are also ComplyWorks users and have SECOR certification. We are proud to meet or exceed your safety requirements.

BOOST PRODUCTION

Documented Cost Reductions

PROFIT WAS INCREASED BY \$1M+

Overview: Ezops Natural Gas Field & Plant Operations Management Software

We created Ezops data acquisition software to optimize natural gas field and plant operations. Under the guidance of our development team, who rely on constant feedback from our field operators, we continue to add and test new functionality for Ezops. This program overview only lightly scratches the surface of our program's functionality; ask us how our proprietary software, in conjunction with the rest of Reliance services, can further help you lower costs, boost productivity, and increase your profits.

Use Online or Offline

- Enter data anywhere you are, sync when data service is available
- Promotes increased accountability

Digital Tracking

- The team is connected leading to less communication errors
- Cloud storage for data with automated backups
- Real-time, searchable data access
- Customizable to your operation

Optimized Pigging Scheduling

- Tracks Network of Pigs with automated time-stamping
- Helps prevent unnecessary trips to pig locations

Chemical Consumption Tracking

- Automated calculations for current injection rates using inputted data
- Increase in accuracy leads to efficient planning and cost-cutting

Well Site Specific Data

- Increase communication for individual well sites
- Centralized data for each site
- Encourages preparedness for well site visits

Task Management

- Assign tasks and set priorities for individual wells
- Keeps individuals aware and accountable
- Leads to less downtime and more accurate preventative maintenance

Plant and Compressor Logging

- Logs allow for trend spotting, leading to the ability to predict and prevent failures

Maintenance and Calibration Tracking

- Digitally track maintenance and calibration schedules
- Coordinate maintenance schedules to save money and maintain higher production

Production

- Upload CSV files direct to Ezops
- Automatically visualizes errors, allowing for fast correction
- Promotes faster transfer of correct data to accounting programs

Reporting

- Exports pigging and chemical reports
- Helps complete the accountability cycle
